TECHNICAL PROJECTS

Containerized Full-Stack App | *Docker & Laravel*

Jan 2026

- Architected a microservices infrastructure using Docker Compose to orchestrate Laravel (Backend), Vue.js (Frontend), and MySQL services.
- Implemented Multi-Stage Docker Builds to serve static assets via Nginx, reducing production image size.
- Configured custom PHP-FPM containers and automated shell scripts for dependency management and Linux file permission handling.

Book Recommendation System | *Django & React*

Jun 2025

- Developed a full-stack web application using Django and React that utilizes collaborative filtering algorithms (Pandas/NumPy).
- Designed a REST API to facilitate seamless data transfer and deployed the application on a Linux Server.
- *Link:* <https://github.com/Nirajan09/BookRecommendationSystem>

Disposable Email Service | *Django & API Integration*

May 2025

- Developed a privacy-focused web application utilizing external REST APIs to generate temporary email addresses.
- Implemented asynchronous JavaScript (Fetch API) to auto-refresh the inbox interface without page reloads.
- Engineered JSON parsing mechanisms to display real-time email content.
